WHAT IS CLAIMED IS:

- 1. An apparatus for homogeneously distributing lights, comprising:
- a light guide plate;

an incidence microstructure being arranged on a surface of the light guide plate and opposite to a light source; and

an emergence microstructure, the emergence microstructure being arranged on a surface of the light guide plate opposite to the incidence microstructure;

wherein the lights emitted by the light source pass through said apparatus thereby being homogenously distributed.

- 2. The apparatus as claimed in claim 1, wherein the incidence microstructure is a continuous structure or a discontinuous structure having a triangle cross-section and longitudinally arranged along the light source.
- 3. The apparatus as claimed in claim 1, wherein the emergence microstructure is a continuous structure or a discontinuous structure having a triangle cross-section and longitudinally arranged along the light source.
- 4. The apparatus as claimed in claim 1, wherein the emergence microstructure is a micro lens array structure.
- 5. The apparatus as claimed in claim 4, wherein the micro lens array structure is a structure selected from the groups consisting of honeycombed structure, circular dot structure and irregular structure.
- 6. The apparatus as claimed in claim 1, wherein the light source is a plurality of lamp.
- 7. The apparatus as claimed in claim 1, wherein the light guide plate is made of one of a light transmitting polymer material and a semi light transmitting polymer material.
- 8. The apparatus as claimed in claim 1, wherein the apparatus is applied to a backlight module of an LCD panel.
